⚙ WORK HISTORY

📅 Dec 2020 - Current
📍 LV NET, Las Vegas
IT Technician

- Diagnosed, troubleshot and resolved a range of software, hardware and connectivity issues related to fixed wireless internet. Excelled in inquiring about complications, researching, analyzing and rectifying problems which improved quality of service, reduced client attrition and led to being employee of the month runner up.
- Converted dozens of residents into clients, created and managed accounts, increasing yearly revenue by over $30,000 in three months.

📅 May 2020 - Dec 2020
📍 WebMall, Las Angeles
Full Stack Developer

- Converted business requirements into RESTful services for order, invoice and discount features of the application by developing tables, stored procedures, routes and controllers in MSSQL and NodeJS. Integrated developed RESTful services into ReactJS components using Axios.
- Enhanced security of the application by implementing role guards in React Router and adding data validation using Formik, Yup and Joi in ReactJS and NodeJS respectively.
- Participated in stand-up meetings and performed peer code reviews prior to updating the repository with Git in an agile/scrum environment, ensuring timelines were met and erroneous code did not disrupt performance of the application.

📅 Jan 2020 - May 2020
📍 American Income
Benefits Advisor

- Performed outbound calls, met with prospective customers and presented information related to available services resulting in the conversion of dozens of residents into clients.
- Outreached to lapsed policy owners and re-enrolled them into benefit programs, increasing customer retention.
- Assisted clients with completion of appropriate forms, scheduling necessary medical examinations, fulfilling legal and regulatory requirements.

📅 Mar 2016 - Dec 2019
📍 U.S. Army.
GEOINT Analyst

- Received an Army Commendation Medal for exploiting 1000s of hours of Full Motion Video, creating 100s of imagery derived products and assisting countless commander's decision making within three combatant commands.
- Established and encrypted communication channels involving radio and antenna devices. Resolved hardware, network, and software issues pertaining to RHEL7 and Windows devices. Efforts led to earning two Army Achievement Medals.
- Collected over 3000 data points and produced a quantitative and qualitative assessment for a pilot program, used by key decision makers to improve the functionality of AI.
- Developed macros in excel that optimized workflow by over 30%, enabled quick collation of data and reduced analyst burden.
- Produced a continuity book with instructional guides for incoming analysts mitigating time spent on-boarding and training personnel by several weeks.
